BibTeX

Conclusion

- High quality output
- Unparalleled math/equation typesetting
- Powerful bibliography management
- Handles massive documents with ease
- Free and OS agnostic
- You get to use your favorite text editor
- Highly extensible
- **Focus on content, not formatting**

# Don't use LaTeX if...

Conclusion

## Downloading

- **Linux** Check your software repository.
  - `sudo apt-get install texlive-full`
- **OS X** MacTeX
  - `http://www.tug.org/mactex/`
  - `brew install pdflatex`
- **Windows** ProTeXt
  - `http://www.tug.org/protext/`

## Compiling [command line]

- `pdflatex -file-line-error -interaction=nonstopmode yourfile.tex`

## Compiling [GUI]

- Click buttons and/or mash keyboard.
- If that doesn't work, try touching the screen or using voice commands.

BibTeX

Conclusion

- <http://en.wikibooks.org/wiki/LaTeX/Mathematics>

- Begin and end inline equations:

$\$$  math goes here  $\$$

- Begin and end display equations:

```
\begin{equation}
    math goes here
\end{equation}
```

- The only symbols accessed directly from the keyboard:

- $+ - = ! / ( ) [ ] < > | ' :$

The rest are all commands!

- Spaces are ignored entirely in equations.

- How to remember them all? Don't! Use **Dextrify**!

- <http://detexify.kirelabs.org/classify.html>

# Math Mode Examples

How do  
L<sup>A</sup>T<sub>E</sub>X?

Eric Krause

Why  
L<sup>A</sup>T<sub>E</sub>X?

Getting  
Started

Formatting

Math Mode

Tabular  
Mode

Graphics

Floats

Listings

BibTeX

Conclusion

## Output:

**Inline math mode:**

I think  $x(t) = a_0 + \sum_{n=1}^{\infty} [a_n \cos(n\omega_0 t) + b_n \sin(n\omega_0 t)] = \sum_{n=-\infty}^{+\infty} c_n e^{jn\omega_0 t}$  is a Fourier series or something.

**Display math mode:**

$$\frac{Dies}{Wafer} = \frac{\pi \cdot (Wafer \ Diameter/2)^2}{DieArea} - \frac{\pi \cdot Wafer \ Diameter}{\sqrt{2} \cdot Die \ Area} \quad (1)$$

Use display math mode for centered, numbered equations like equation 1 that you can refer to later.

## Source:

```
1 \noindent \textbf{Inline math mode:}\\
2 I think $x(t)=a_0 + \sum\limits_{n=1}^{\infty} [a_n \cos(n\omega_0 t) + b_n \sin(n\omega_0 t)] = \sum\limits_{n=-\infty}^{+\infty} c_n e^{jn\omega_0 t}$ is a Fourier series or something.\\
3
4 \noindent \textbf{Display math mode:}\\
5 \begin{equation}
6 \label{eq:dies}
7 \dfrac{Dies}{Wafer} = \dfrac {\pi \cdot (Wafer \ Diameter/2)^2}{Die
   Area} - \dfrac {\pi \cdot Wafer \ Diameter}{\sqrt{2} \cdot
   Die \ Area}}
8 \end{equation}
9 Use display math mode for centered, numbered equations like
   equation \ref{eq:dies} that you can refer to later.
10 \end{document}
```

# Using the Tabular Environment

How do

Eric Krause

Why  
L<sup>A</sup>T<sub>E</sub>X?

Getting  
Started

Formatting

Math Mode

Tabular  
Mode

Graphics

Floats

Listings

BibTeX

Conclusion

- 1 **Begin tabular mode** specifying the number of columns, alignment, and vertical lines.
- 2 **Input table rows** indicating separations between cells, specifying when to begin a new row, and where to include horizontal lines.
- 3 **End tabular mode**

# Beginning A Tabular Environment

How do  
L<sup>A</sup>T<sub>E</sub>X?

Eric Krause

Why  
L<sup>A</sup>T<sub>E</sub>X?

Getting  
Started

Formatting

Math Mode

Tabular  
Mode

Graphics

Floats

Listings

BibTeX

Conclusion

Started using the following command:

```
\begin{tabular}[] {column specification}
```

- The environment we are starting is **tabular**.
- The type, location, and alignment of columns and vertical lines is given using the **column specification**
  - l — left-aligned column
  - c — center-aligned column
  - r — right-aligned column
  - p{width} — paragraph column, must specify width.
  - | — vertical line (|| = double, ||| = triple ...)

# Adding Contents

How do  
L<sup>A</sup>T<sub>E</sub>X?

Eric Krause

Why  
L<sup>A</sup>T<sub>E</sub>X?

Getting  
Started

Formatting

Math Mode

Tabular  
Mode

Graphics

Floats

Listings

BibTeX

Conclusion

- Once in a tabular environment, table contents, separations between cells, and newlines are entered.
  - `&` — column separator
  - `\\` — start new row
  - `\hline` — horizontal line
  - `\newline` — start new line in cell (paragraph cells only)

## Sample Table:

```
1 \begin{tabular}{|l||l|c|r|p{1in}||}\hline
2      & -Tubes & & -Sphere & & -Net & & -Web & \\\hline
3 Blog- & & x & & & & & x & \\
4 E- & & & & x & & x & & \\
5 Inter- & & & & x & & & & \\
6 Web & & x & & x & & & x & \\\hline
7 \end{tabular}
```

BibTex

Conclusion

- `\usepackage{graphicx}`
- Once `graphicx` is included, images are imported using:  
`\includegraphics[options]{image name}`
- Useful optional parameters:
  - `width=xx` — manual width
  - `height=xx` — manual height
  - `angle=xx` — used to rotate image
  - `scale=xx` — manual scaling
- `[width=\textwidth]` *% full-page width*
- `[width=.5\textwidth]` *% half-page width*

# Includegraphics Example

L<sup>A</sup>T<sub>E</sub>X?

Getting  
Started

Formatting

Math Mode

Tabular  
Mode

Graphics

Floats

Listings

BibTex

Conclusion

- A container that cannot be broken across multiple pages
- L<sup>A</sup>T<sub>E</sub>X defines **figure** and **table** floats
- Floats (should) have captions and references.
- Floats are automatically arranged by L<sup>A</sup>T<sub>E</sub>X , however you can manually specify placement

# Float Placement

How do  
L<sup>A</sup>T<sub>E</sub>X?

Eric Krause

Why  
L<sup>A</sup>T<sub>E</sub>X?

Getting  
Started

Formatting

Math Mode

Tabular  
Mode

Graphics

Floats

Listings

BibTeX

Conclusion

## Format:

```
\begin{figure} [placement specifier]
  \label {fig:cat}
  \caption { this is a photo of a cat }
  %... figure contents ...
\end{figure}
```

- To get number of the float:

```
\ref{name}
```

- Placement Specifiers:

- h --- Place the float (approximately) here
- t --- Position at the top of the page.
- b --- Position at the bottom of the page.
- p --- Put on a special page for floats only.
- ! --- Modifier. Override internal parameters LaTeX uses for determining "good" float positions.
